

KAPPAS

How to score:

First two answers on each sheet worth ten points. Answers 3 – 18 worth 5 points each

Take total of both sheets – for top line of graph

Total of Questionnaire #1 – for side line of graph

Where the numbers intersect – that number is the Physical Suggestibility Score

Subtract that number from 100 to get the emotional score

ie: the combined number from top line and side line comes to 75:-

Then they have a Physical Suggestibility of 75 – and Emotional Suggestibility of 25. So high physical, low Emotional

Note not an exact science but it gives you an idea of how the person will react (physically in the chair) to Hypnosis
